                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            constitution of the structural homology to known human procedure. The STRAP-1 con a significant structural homology to known human procedure. The STRAP-1 con a significant structural commoner PD2. STRAP-1 is thought to be a cype IIIa membrane protein and is expressed predominantly in proseate colls in normal human tissues. Structurally, STRAP-1 is a 139 amino call protein characterised by six transmembrane domains and citeration. On acid protein characterised by six transmembrane domains and citeration. Structurally, STRAP-1 is a 139 amino call protein characterised by six transmembrane domains and citeration contains and citeration protein expression is maintained at high lavels and creation protein expression is maintained at high lavels and creation of the STRAP protein is contained to the structural protein six contains a feature which is shared by certain ion chemnels) or gap-junction protein (from immunohistochemical staining) strap-1 and strap-2 are call-sufface tumour antigens. Immunisation with a STRAP creating induces callular and humoral immunohistochemical staining) strap-1 and strap-2 are call-sufface tumour antigens. Immunisation with a STRAP specific-binding agents, to produce anticancer vaccines and to generate specific-binding agents, to produce anticancer vaccines and to generate specific sinduces of cancers for susceptibility to cancer), as therapeutic and monitoring of cancers for susceptibility to cancer), as therapeutic and monitoring of cancers for susceptibility to cancer), as therapeutic and monitoring of cancers for susceptibility to cancer). STRAP conclusions are specific acids may be used for recombinant protein processing cells for screening inhibitors of STRAP expression state stay of the trapeutic approach is are expressed mainly conditation of STRAP expression. Since high lavels of STRAP conditation of STRAP approaches the specific on price and colline specific on the season of the tissues.
                                                                                                                                                                                                                                                                                                                                                                                                        Best Loc

```
The present invention relates to human six transmembrane spitbalish antigen of the prostate (SIERAN) protein SIERAN is a member of cell surface serpentine transmembrane sntigens. SIERAN sea as a sea of cell surface serpentine transmembrane sntigens. SIERAN sea used in gene present colon, butched killing only a spread of cancer (e.g. prostate colon, butched killing only a spread strategy of a spread of cancer (e.g. prostate strategy of the spread of cancer (e.g. prostate strategy of the spread of cancer (e.g. prostate strategy of the spread of cancer (e.g. prostate strategy of the spread of cancer (e.g. prostate strategy of the spread of cancer (e.g. prostate strategy) and the spread of cancer (e.g. prostate strategy) and the spread of cancer (e.g. prostate strategy) and the spread of the spread of cancer (e.g. prostate strategy) and the spread of the cancer cells and the spread of spread of the spread of cancer (e.g. prostate) and the spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread of spread

This sequence represents a novel human protein, STRAP-1 (serpentine transmembrane antigen of the protected). STRAP-1 is the protectype commber of the STRAP family of proteins (AAYSS19-4YSB197) which can be considered that the protectype considered the strategy of the protein (AAYSS19-4YSB197) which can significant structural homology to known human proteins. The STRAP-1 con significant structural homology to known human proteins thought to be a type IIIa membrane protein and is expressed predominantly in prostate cells in normal human tissues. Structurally, STRAP-1 is a 39 amino cald protein characterised by six transmembrane domains and intracellular N- and C-termini, suggesting that it folds in a construction and two intracellular loops. Can be considered that the strate of the strate of the strate of the strate of cancer. STRAP-1 mRNA and protein expression is maintained at high levels and controlled that an overexpressed in certain other cancers, including bladder, colon, can be considered to the strate proteins is not known. They may be ion channels (from the presence of six transmembrane demains, a feature which is shared by cortain ion channels). STRAP-1 and gap-junction proteins (from immunohistochemical staining). STRAP-1 and

The antibodies are useful for detecting the presence of cancer, especially presente cencer. The polypeptides polymucleoxides and the antigen-presenting cells are useful for stimulating and/or expanding reals specific for a tumour protein, and for inhibiting and/or expanding of cells appecified to comprising the development of cancer especially present energy content on comprising the polymucleoxide and/or polypeptide are useful for stimulating and for treating cancer. The oligonucleoxide is useful for electing cancer. The oligonucleoxide is useful for electing cancer. The present sequence is a prostate specific
                                                                                                                                                                                                                                                                                                                Tang YT,
Zhao QA,
Xue AJ,
The invention relates to polymuclectides (AAKS1456-AAKS3435) and the encoded polymeptides (AAM78323-AAM80302) that exhibit activity elating to cyrokine, cell proliferation or cell differentiation or which may induce
                                                                                                                                                        Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy -
                                                                                                                                                                                                                                        WPI; 2001-476283/51.

New polynucleotide encoding a prostate-specific protein, for diagnosing, monitoring and treating prostate cancer in a patient and use in vaccines

Claim 2; Page 510-512; 543pp; English

AMOUTAGE

ANOTAGE

AN The present invention describes polymucleotide sequences (1) which encode prostate specific proteins (II). I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I), (II), antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and the antibodies are also used in the detection of cancer in a patient. The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used for monitoring the progression of cancer in a patient. (I) and (II) can be used for monitoring the progression of cancer in a patient. (I) and (II) can also be used to improve diagnostic and therapsutic methods for prostate cancer. They can indicate the level of metastisatis as well as the prostate cancer. They can indicate the level of metastisatis as well as the prostate cancer. They can indicate the level of metastisatis represent polynucleotide and amino acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SXS
            or the present invention relates to methods of detecting a prostate cancer associated transcript in a cell from a partient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynuclectides (designated PC gense) that content is at least 80 tidentical to them. The prostate cancer-associated polynuclectide sequences to are differentially expressed in prostate thmour tissue or in prostate cancer and are derived from the tissues of various or prostate cancer and are derived from the tissues of various or prostate cancer and mammals. The prostate cancer associated genes are useful for diagnosing or treating prostate cancer, as well as for the streating prostate cancer, as well as for the streating prostate cancer, as well as for the prostate cancer or gents that inhibit prostate cancer. The nucleic said sequences are particularly useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides prostate-specific coding sequences and their encoded proteins. These can be used in the diagnosis and treatment of cancers, particularly prostate cencer. The present sequence is a protein described in the invention.

The invention relates to polynucleotides (AAK51456-AAK5145) and the encoded polypeptides (AAM73237-AAM80102) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hasmacropicisis regulating e.g. stem cell growth factor activity, hammomodulatory activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and of the concert, leukaemia, nervous system disorders, arthritis and 2111 (AAK52582) and 3666 from the sequence listing

                                                                                                                                                                                                                                                                                                                                                                                                surface serpentine transmembrane antigens. STEAP-1 gene is located on chromosome 792.2 and is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate. colon, bladder, kluing ovarian and pencreatic) expressing STEAP or inhibiting growth or Killing cells expressing STEAP in a patient. Comprises administering a vaccine composition to the patient. Treating a patient with a cancer that expresses of STEAP, or inhibiting growth or Killing cells expressing STEAP, comprises administering to the patient a vector encoding single chain monoclonal antibody that comprises the variable domains of the heavy and light chains of the monoclonal antibody that specifically binds to STEAP, such that the vector delivers the single chain monoclonal antibody coding sequence to the cancer rells and the encoded single chain monoclonal

CC by expressing KIM encoding polymucleorides, to pronoce growth and/or control of damaged tissue (e.g. renal tissue), since the KIM proteins care upregulated in injured or regenerating (especially renal) insuses.

CC KIM fusion proteins, conjugates, antibodies and vectors can also be used the temperature of the proteins may be included with an exceptable carrier in pharmaceutical compositions, useful for therapy.

CC prophylaxis of conditions associated with distunction/disregulation or therapy.

CC prophylaxis of conditions associated with distunction/disregulation or proteins, especially renal diseases or impairments of renal CC function in humans (e.g. acute renal failure, acute nephritis). The national function in humans (e.g. acute renal failure, acute nephritis). The conjugated into cella, can disrupt expression of a cellular KIM gene, continued to the product antisense sequences which, when continued the cellular KIM gene, can disrupt expression of a cellular KIM gene, continued to the growth of tumours dependent on CKIM for growth) or compositions. The nucleic acids and proceins are used to prevent, treat (e.g. by gene therapy) or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cate, dogs, chickens or sheep. They care also used in diagnosing a pathological condition or susceptibility or a pathological condition. The antibodies to the antigens can also be used in alleviating symptoms associated with the disorders and in dispose tic immunoassays e.g. radioismunoassays or enzyme linked the munossays (ELISA). Disorders which are diagnosed or treated immunoarbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rehumatoid arthritis, crebrovascular disorders e.g. cardiac arrest, crebrovascular disorders (c.g. cardiac arrest, crebrovascular disorders e.g. cardiac cardiac arrest e.g. cardiac arrest e.g. cardiac arrest e.g. cardiac arrest e.g. cardiac arrest e.g. cardiac arres

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (HIV) Specifically, ANY2810-Y22910 are derived from pil proteins (of known HIV virus strains (ANY2810, ANY2810, ANY2818), ANY2881 and ANY2810 represent consensus sequences of various sections of the gp41 protein). Sequences derived from the peptides are used to produce constrained helical peptides of the invention. The constrained helical peptides of the invention. The constrained helical peptides of the invention are used to produce a group able to form an anide coming acids have a side-chain that includes a group able to form an anide coming acids have a side-chain that includes a group able to form an anide coming acids have a side-chain that includes a group able to form an anide coming and cyclising the occapeptide by reacting the specified side-chain cresidues with a difunctional linker to produce two amide bonds.

The constrained helical peptides are used to treat or prevent HIV creating the specially as vaccines that generate antibodies that prevent viral membrane fusion or infectivity. Vaccines may contain constrained helical peptides derived from several different strains of the prevent that the constrained helical peptides are in affinity purification other uses for the constrained helical peptides are in affinity purification of ilgands (particularly where complete binding protein is not readily contributed to antibody clones from phage display libraries, or as stable or from some time to proceins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Production of constrained helical peptide(s) by linking side chains on termini of octa:peptide - derived from human immunodeficiency virus gp41 protein, useful in vaccines for treatment and prevention of infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to cyclic peptides (A) with a constrained helical conformation, derived from gp41 (glycoprotein 41, a vital envelope CC protein) protein of human immunodeficiency virus (HIV). The cyclic CC peptides from a consensus sequence of gp41 derived from HIV clades A, B, CC, D, B or O. The peptides are used to cause induction of a specific timume response, resulting in antibodies that prevent virus-induced communate fusion. The peptides are used to treat subjects with or at risk CC, B, B or O. The peptides are used to treat subjects with or at risk commune response, resulting in antibodies that prevent virus-induced communate fusion. The peptides are used to treat subjects with or at risk cc. HIV infection, either as antifusion/anti-infection agents or vaccine) to raise antibodies. The antibodies may be used for diagnosis or vaccine) to raise antibodies. The antibodies may be used for diagnosis or consensual to the vaccine of the transmission or in cases of health care accidents. The peptides can be based on specific HIV cases of health care accidents. The peptides can be based on specific HIV cases of health care accidents. The peptides can be based on specific protection. The present sequence is gp41 procesh from a particular consensual processin from a particular consensual process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

production of constrained helical peptide(s) by linking side chains
on termini of octa:peptide - derived from human immunodeficiency
virus gp41 protein, useful in vaccines for treatment and prevention
of infection

Claim 11; Page 174-175; 279pp; English.

(FIV). Specifically. ANYZENO XZENO ANYZENO ANY Peptides AAY22805-Y22917 are derived from Human immunodeficiency virus

BEDOL. Chem. 264.19052-19059(1989)

J. BEDOL. CHEM. 264.19052-19059(1989)

I. EUNCTION: ARYLPHORIN IS A LARVIAL STORAGE PROTEIN (LSB) WHICH SERVY AS A SOURCE OF AROUMEN OF THE SCHEROTIZING SYSTEM OF THE CUTICLE, AND SIA A CORRETE FOR ECVSTERGOID IORNOVAE.

AS A CARRETE FOR ECVSTERGOID IORNOVAE.

I. SUBUNIT: ARYLPHORIN IS A HEXAMER OF SUBUNITS ALPHA AND BETA.

II SUBCELLUMA LOCATION: EXTRACEIDLAR.

ITSSUE SPECIFICITY: FAT BODY.

SIMILARITY: TO ARYB. TO B.MORI STORAGE PROTEINS 1 AND 2, AND ARTHROPOD HEMOCYANINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDINE=90037032, PubMed=2808410; Willott E., Wang X.-Y., Wells M.A.; Wang X.-Y., Wells M.A.; while the arylphorin, an aromatic "cDNA and gene sequence of Manduca sexta arylphorin, an aromatic amino acid-rich larval serum protein. Homology to arthropod
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-104-1990 (Rel. 13, Created)
